

Immigrant Records for 1920.

BY THE EDITOR.

During the year 1920, thirteen immigrant insects were recorded for the first time. A few of them were probably quite recent arrivals, but for the most part they have been known here for a number of years without having been determined or recorded. One species, *Ammophorus insularis*, was recorded from Honolulu in 1858, but had not been seen since. It escaped mention in the Fauna Hawaiiensis. It has now been re-discovered.

A list is here given with the pages on which records occur, and notes in regard to habits, etc.

<i>Lepisma</i> sp. (Thysan.).....	453
<i>Allograpta obliqua</i> (Say) (Dipt.), new Syrphid....	456, 521
<i>Stenommatatus musae</i> Marshall (Col.).....	457
<i>Coccus acutissimus</i> Green (Hem.).....	458
<i>Ammophorus insularis</i> Boh. (Col.).....	466
<i>Thoracaphis fici</i> (Hem.).....	471, 473
<i>Eucnocrus anthrenoides</i> Sharp (?) (Col.)...	487, 524, 606
<i>Megachile fullawayi</i> Cockerell (Hym.).....	524, 552, 556
<i>Psammodytes nanus</i> De Geer (Col.).....	606
<i>Saprinus fimbriatus</i> Leconte (Col.).....	607
<i>Paromalus lautus</i> Zimm. (Col.).....	607
<i>Cercyon quisquilius</i> Linn. (Col.).....	607
<i>Cryptopleurum minutus</i> Fab. (Col.).....	607
<i>Oxytelus sculptus</i> Gray. (Col.).....	607
<i>Vespa occidentalis</i> Cresson (Hym)	465
